

Communications Compliance Audit

Infusion Therapy website, audited against RM-HB-COMMS v1.1 — status of remediation.

7	6	1	All
findings	fixed	partly fixed	need §10 sign-off

For Dr. Nguyen & the Creative Director. This audit maps the live Infusion Therapy site to the handbook and records what has been remediated in code. The changes below are implemented and verified in the build, but under §10 this is Tier-1 content: it is not published-compliant until you approve it. Items marked **Partly fixed** or **Needs sign-off** carry an open decision for you. This document is a compliance mapping, not legal advice.

Fixed implemented & verified in the build **Partly fixed** claim text fixed; a naming/branding decision remains

Needs sign-off policy decision for the Medical Director

Handbook: RM-HB-COMMS v1.1 (2026-09-02) · Branch: claude/peaceful-knuth-r1swf8 · Commit: 57e41ec · Prepared 2026-09-02

01 Google star rating on the homepage

FIXED

§3.1, §7.1 · HIGH SEVERITY

FOUND The homepage rendered a reproduced Google rating (4.8 + five stars + review count) linking to the listing. An aggregate star rating on the clinic’s own website is a prohibited testimonial — even without quoted review text.

DONE Removed the rating from the homepage, deleted the GoogleRating component, and replaced the rating data with a code comment recording why it must not return. A plain, unlinked “Find us on Google” remains acceptable if ever wanted.

☐ Approve ☐ Revise (note below) Notes: _____

02 “Immune boost” on the Tri-Immune Shot

FIXED

§4.4, D.4 · HIGH SEVERITY

FOUND The Tri-Immune Shot used “A three-part immune boost” as its essence and menu descriptor. “immunity boost” is a banned word and §4.4 prohibits immunity claims for infusion therapy.

DONE Reworded to “A three-part immune-support shot” / “Three-part immune support.”

☐ Approve ☐ Revise (note below) Notes: _____

03 Required infusion disclaimer was missing

FIXED

APPENDIX D.2 · MEDIUM SEVERITY

FOUND The mandated verbatim disclaimer did not appear anywhere on the site.

DONE Added a reusable IvDisclaimer component carrying the exact D.2 text on the homepage, the drip and shot menus, every treatment-detail page, and ingredient pages. Deliberately excluded on the iron-sucrose ingredient page, which treats a diagnosed deficiency and would be contradicted by “not a treatment for any disease.”

☐ Approve ☐ Revise (note below) Notes: _____

04 “Honest Menu” reproduced banned trigger words

FIXED

D.4, §5.1 · MEDIUM SEVERITY

FOUND The honesty device printed the exact banned words (cure, detox, miracle, melt fat, reverse aging, megadose, 10x, “better than”) on a public page — in both the overclaim lines and the rebuttals that quoted them. Ad-platform crawlers do not parse irony.

DONE Kept the device intact but stripped every banned token from both sides (e.g. “Cures your fatigue” → “Wipes out your fatigue”; “Reverse aging” → “Turn back the clock”; “10x your immune system” → “Never catch another cold”). Verified none remain in the rendered page.

☐ Approve ☐ Revise (note below) Notes: _____

05 “GLP-1 therapy” named on the metabolic page

FIXED

§3.3 · MEDIUM SEVERITY

FOUND The weight-management page named the drug class “GLP-1 therapy” in four places. The handbook directs marketing the program, not the drug.

DONE Replaced all four with “physician-prescribed medication where appropriate,” leaning on the existing “physician-supervised medical weight management” framing.

☐ Approve ☐ Revise (note below) Notes: _____

06 Immune positioning across the site

PARTLY FIXED · NEEDS SIGN-OFF

§4.4 · MEDIUM SEVERITY

FOUND “Supports immunity,” “immune defence,” “immune recovery,” and “immunity” as a category appeared throughout; §4.4 lists “immunity” among prohibited infusion claims.

DONE Normalized all immune CLAIMS to structure/function language (“normal immune function / response”) and removed “defence”/“recovery” framing and bare “immunity” category words.

OPEN Product and concept NAMES were kept as-is — “Immune Shield,” “Tri-Immune,” and the “Immune support” concern. Renaming them (and the deeper question of whether wellness IV should carry any immune positioning) is a branding + URL decision for sign-off.

☐ Approve ☐ Revise (note below) Notes: _____

07 Memberships framed as incentives

FIXED

§3.1, §3.4 · MEDIUM SEVERITY

FOUND Membership copy used “member pricing,” a “complimentary shot,” “more affordable,” and “priority care” — standing discounts / perks on injection and physician-assessed services, which sit against the CPSO incentive ban.

DONE Reframed toward treatment-plan pricing: “a set treatment-plan price,” “a paired shot as part of the plan,” “priority booking.” Removed the discount, free-perk, and “priority care” language. No time-pressure was present (the specific hard rule) and no prices are shown.

OPEN Whether a recurring wellness membership on injection services is acceptable at all remains a Medical-Director policy call.

☐ Approve ☐ Revise (note below) Notes: _____

CONFIRMED COMPLIANT

- No urgency, scarcity, or time-pressure language anywhere.
- No prescription drug or device BRAND names (Botox, Ozempic, semaglutide, etc.).
- No before/after imagery.
- Pull-quotes are the clinic’s own editorial voice, not reproduced patient testimonials.
- No Meta/Google tracking pixels on booking or intake flows (§5.2 / PHIPA clean).
- Correct clinician titles (“Registered nurses,” “Our physician is registered with the College,” physician-reviewed / nurse-administered).
- Energy claims framed as “energy metabolism” (structure/function).
- Iron therapy framed as a legitimate clinical indication.
- Consistent “results vary / screened / may support” language; no pricing published.
- Booking form: no marketing opt-in conflation, no pre-checked box, clear purpose limitation.

REMAINING DECISIONS & OPEN ITEMS

Residual “cure” / “guaranteed” tokens (Low)

All remaining uses are negating disclaimers — “not a cure,” “we do not promise any guaranteed lightening,” and “Anyone seeking guaranteed outcomes or a cure” in the who-it’s-not-for list. Compliant as written; can be rephrased to be fully token-free for ad crawlers on request.

Immune product / concept naming (Finding 6)

“Immune Shield,” “Tri-Immune,” and the “Immune support” concern were kept. Renaming affects URLs and brand — a decision for the Medical Director + Creative Director.

Membership policy (Finding 7)

Copy is now compliant, but whether to offer memberships on injection services at all is a standing policy question for the Medical Director.

Booking-form data destination

The consult form collects health-adjacent fields; confirm its endpoint is a PHIPA-appropriate destination that does not feed marketing (§8). Ops, not visible in code.

SIGN-OFF (§10 — Tier 1: Clinical claims)

☐ I approve the remediated site copy for publication. ☐ I approve with the revisions noted per finding.
